B & M provides systems test analysis for major European public body

B & M was asked to support the work of examiners by providing testing for IT upgrade systems; systems analysis, system release management and functional operation as part of a project to improve datawarehousing for a major European public sector agency.

Project Objectives

- To support the work of systems examiners within the organisation
- To assure the quality of system software to production environments
- To improve the quality of data
- To ensure the integrity of future systems test analyses.

Project Tasks

- To perform systems test analysis for control systems within the organisation
- To deliver clear documentation to ensure that test processes are performed consistently throughout the organisation in the future.
- To deliver clear documentation to ensure that test processes are performed consistently in the future.

B & M Europe

B & M has specialised in delivering skilled ICT specialists to meet the needs of leading organisations throughout Europe since 1992. We focus exclusively on providing consultancy, technical services and support for z/OS, UNIX and Linux enterprise systems, including third-party systems software, open systems and networking connectivity. We add real value for HR and IT professionals by taking the time to understand their needs and applying best practice methods to deliver results.

Duration

The project is expected to take 16 months.

Results

- Measurable improvement in the overall quality of systems throughout the organisation
- Measurable performance improvement within IT functions.
